

## SM:Vault

**Email archiving without exceptions.  
SM:Vault is airtight, so you can breathe easy.**

### Protect your organization from the risk of non-compliance

Organizations count SM:Vault archiving as a valuable component in their email compliance toolset. Now you can manage your email marketing program with the confidence that your organization is in position to satisfy the requirements of digital communications audits that may be requested.

Unlike other email archival solutions that leave the door open for variable message content to slip through the cracks, SM:Vault captures exact copies of every HTML and plain-text message sent through our system, including all content that may be personalized to individual recipients. The integrity of these messages is ensured by SM:Vault, which prevents any messages from being erased or altered in any way until the pre-determined system expiration date is reached.

### In the Vault

#### Access

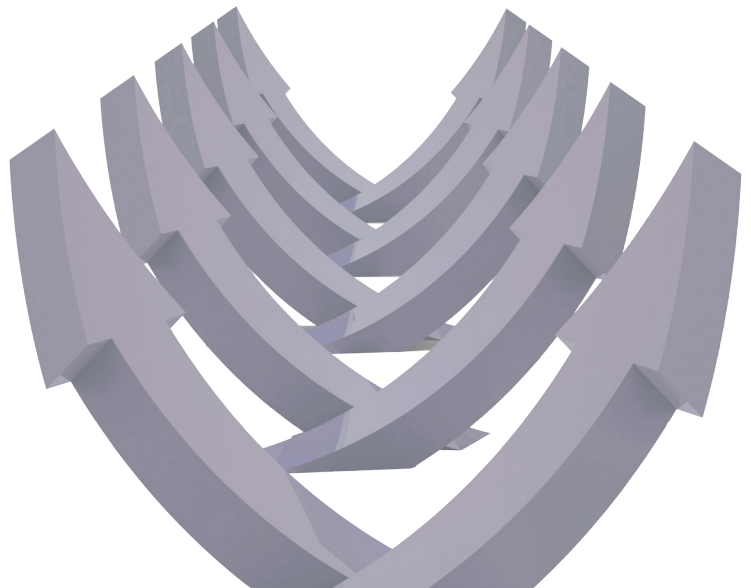

- Secure 24/7 archive access for approved members of your organization
- Multiple user support
- Search for messages by date, subject, header information or by body text
- View full archive of message iterations

#### Control

- Set archived messages to expire after "x" days/weeks
- Post-deployment message lockdown to prevent deletion or alteration prior to expiration

#### Data

- Collects 100% of sent messages
- WORM-based storage
- Provides set data retention standards
- Secure automated data removal
- Secure FTP access available for data retrieval
